SUMMARY

Flutter Developer with 2 years of experience building cross-platform mobile applications. Skilled in developing responsive, user-friendly apps using Flutter and Dart, with a strong understanding of state management and clean code principles. Passionate about delivering high-quality solutions and continuously improving performance and user experience.

SKILLS

Languages: Dart, C++

Mobile Development: Flutter, Google Maps Integration, Payment Gateways Integration, Firebase Cloud Messaging

State Management: Bloc, Cubit

Architecture & Code Quality: Clean Architecture, MVVM, SOLID, Clean Code Principles, Dependency Injection (get_it, injectable)

Networking & Storage: RESTful APIs, Dio, Retrofit, Socket.IO, Hive, SharedPreferences, Secure Storage

Backend & Databases: Firebase, Supabase

Tools: Git, GitHub, GitFlow, Figma

WORK EXPERIENCE

Flutter Developer | Jiwar Global Systems | November 2025 – Present

- Develop and maintain production Flutter apps for the Jiwar platform, including Jiwar Hub (published on Google Play) and the Jiwar community management app.
- Build features with Clean Architecture and Bloc/Cubit, using get_it and injectable for dependency injection.
- Integrate REST APIs with Dio and Retrofit and real-time updates with Socket.IO, with centralized error handling.
- Implement secure authentication and session handling with flutter_secure_storage and role-based access.
- Deliver bilingual (English/Arabic) pixel-perfect UIs from Figma designs with skeleton loading states.
- Collaborate with the team through GitFlow, feature branches, pull requests, and code reviews.

PROJECTS

Jiwar Hub | Educational Platform

Google Play: play.google.com/store/apps/details?id=com.jiwar.jiwarhub

- Smart educational platform connecting schools, administrators, teachers, students, and parents in one secure digital environment.
- Parent features: attendance tracking, absence requests, direct chat with school staff, school bus tracking, and app usage monitoring and restrictions.
- Student features: class schedules, teacher feedback, online exams, and an AI-powered learning assistant.
- Built with Flutter, Bloc/Cubit, and Clean Architecture, with role-based experiences for each user type.

Mr. Price | E-commerce Application
Google Play: play.google.com/store/apps/details?id=com.mrprice.app

- E-commerce and retail platform for health, beauty, and household products, with tiered pricing for different customer types (Pharmacies, Large Clients, etc.).
- Built a scalable Flutter application using BLoC for state management and GoRouter for navigation.
- Developed a dynamic product catalog with category browsing, brand filtering, real-time search, and tiered pricing based on user roles.
- Integrated Firebase (Authentication and Cloud Messaging) and REST APIs using Dio, with local storage for cart and settings.
- Improved performance and UX using image caching, skeleton loading states, and a custom adaptive scaling system for mobile and tablet devices.
- Designed a modern, bilingual (English/Arabic) responsive UI with smooth animations and a consistent design system.

Money Talk | Expense Tracking Application
Google Play: play.google.com/store/apps/details?id=com.abbas.moneytalk

- Developed a smart expense tracking app that allows users to log daily expenses via voice input or receipt capture.
- Built an automated expense categorization and monthly insights system to help users analyze spending behavior.
- Integrated Supabase for authentication and database management, with real-time data synchronization.
- Connected Firebase Cloud Messaging (FCM) with Supabase to deliver timely spending reminders and notifications.
- Implemented Clean Architecture with scalable state management for maintainable and modular feature development.
- Designed a simple, user-friendly interface focused on fast input flow and clear financial summaries.

3la Feen | Ride-Hailing Application

- Developed a real-time ride-hailing application using Flutter and Supabase with dual-role interfaces for Drivers and Passengers.
- Implemented scalable state management using Bloc/Cubit and managed the full trip lifecycle from request to payment and rating.
- Integrated Supabase (Auth, Realtime DB, Storage), Google Maps API for live tracking and route visualization, and Firebase Cloud Messaging for instant trip updates.
- Built advanced live tracking with polyline rendering and real-time location updates.
- Enhanced system stability with safe state emission handling and optimized navigation using GoRouter with role-based routing and deep linking.
- Designed a modern, responsive UI with Light/Dark mode, custom map markers, and smooth loading animations (Shimmer and Lottie).

EDUCATION

Bachelor of Computer Science | Faculty of Computers and Information, El Menofia University | 09/2021 – 05/2024
